## Cloud based spam and web filtering with

## TitanFiltering

## Cloud based *email* filtering for business

Today, email is the critical instrument driving business productivity

Unfortunately, this means your email faces a significant number of threats with the ability to destroy your network and disrupt your business

Mistakes as simple as opening or clicking a dodgy email or link can be devastating to your network and/or business

## Cloud based *web* filtering for business

Around 95% of cyber security breaches are due to human error

And malware and web-based attacks are the two most costly attack types, causing companies to spend an average of £1.9 million in defence

## Why TitanFiltering for email filtering?

TitanFiltering has been purpose built to protect users and networks from spam email, viruses, and malware

The cloud solution is designed to easily integrate into existing infrastructure and deployment is very straight forward

TitanFiltering enables businesses to filter their email traffic without any expensive or time consuming disruptions

## Why TitanFiltering for web filtering?

Luckily, TitanFiltering allows you to monitor, control and protect your business and users from online threats

You can create policies for your users to control internet access and block malware in your organisation

TitanFiltering has been purpose built to offer robust control and protection to users, while being extremely easy to set up and manage
